Glass Antennas

Starting from a wideband dipole to four element arrays, mostly for indoor coverage.

Higher Gain Arrays

New Planar design with glass substrate and ground plane reflector for outdoor links up to 20 km.

Measuring Tools

Tools and guides to start up a link. Projects under development to measure SWR of antennas and transmission lines.

Low Cost - Intelligent Design

- Modular concept to satisfy most of the needs
- High, medium or low gain
- Omni directional or directional characteristics
- Input Impedance 50 Ohm
- Large Bandwidth around 2.4 GHz, VSWR -2
- Fabrication faults tolerant
- Mechanical rigidity
- Weather resistant
